

What is DealHub?

DealHub provides extensive real-time monitoring of conversations and trading, including statistics on customer interactions and dealing code usage, whilst its multi-source deal capture capabilities provide for STP from the front office right through to back office systems.

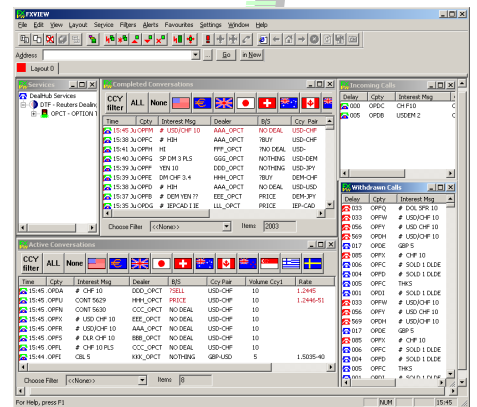

DealHub Features

- ⇒ Dealing Overview
- ⇒ Ticket Capture and Forwarding
- ⇒ Internal Chat & Dealing
- ⇒ EBS Prime Brokerage Handling
- ⇒ Trade Activity / Volume Monitoring
- ⇒ Dealing Code Usage Statistics
- ⇒ Ticket & Conversation Archiving
- ⇒ Printer Replacement

Why do 5 out of the top 10 FX banks favour DealHub?

Overviewing Dealing Room Activity

DealHub enables dealing and conversation activity from multiple sources, including Reuters, EBS, FX portals and proprietary e-commerce platforms, to be overviewed, as it happens, by desk heads and dealing room managers.

Ticket Capture and Forwarding

DealHub captures and forwards deal tickets from dealing services providing a consolidated ticket capture facility and common ticket forwarding platform allied with ability to easily deliver tickets to multiple destinations.

Internal Chat and Dealing

With DealHub, banks can create their own secure and archivable internal chat & dealing environment, eradicating unnecessary Reuters Dealing Codes and Keystations where only internal dealing is required, and achieving substantial cost benefits.

EBS Prime Brokerage

As well as handling EBS Prime Brokerage ticket feeds, DealHub splits the incoming ticket into market counterpart facing and client facing tickets ready for processing by in-house risk management and settlement systems.

Monitoring Trade Activity / Volumes

Sophisticated tools enable aggregate trade activity / volumes to be monitored over user definable periods – overcomes delays in risk management systems acting on tickets from the wide range of dealing sources now available.

Using DealHub's Internal Chat and Dealing capabilities, a major international bank saves in the region of \$2,000,000 annually compared with proprietary dealing services.

Dealing Code Usage Statistics

Analyse Dealing Code usage as well as conversation and dealing activity by counterpart and service levels given / received. Enables tailoring of dealing environment to optimise use of resources and focus on responsive counterparts.

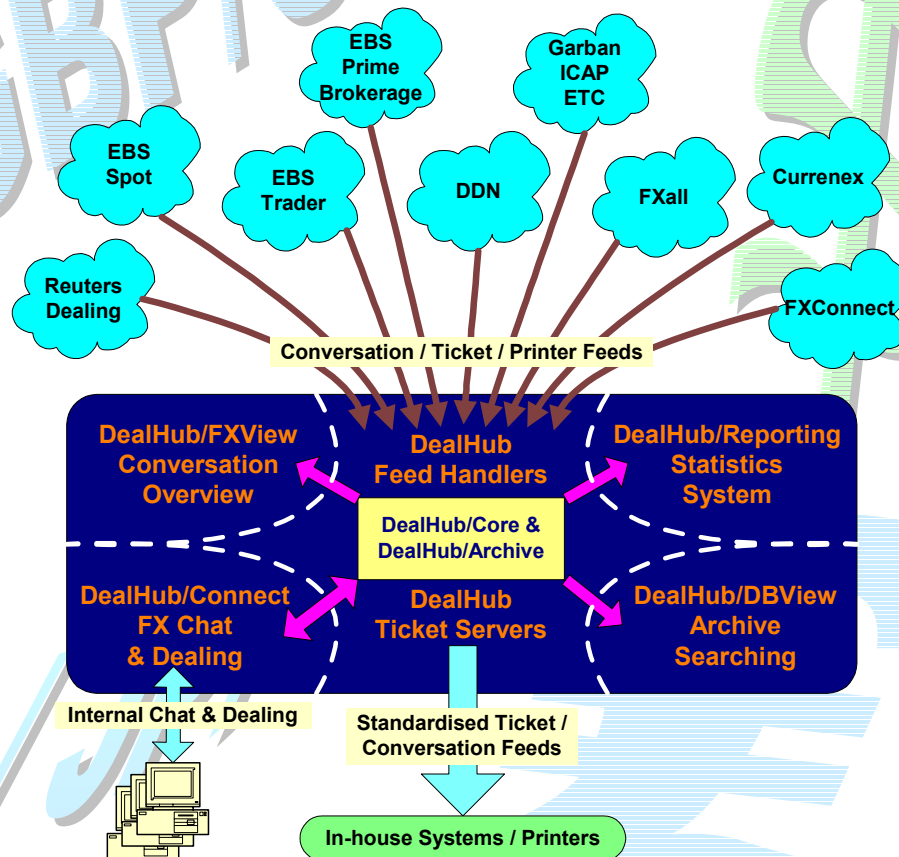

Ticket and Conversation Archiving

Long term on-line searchable archiving of tickets and conversations from all captured sources.

Printer Replacement

Replacement of dealing room ticket and conversation printers. Eradicates paper logs of tickets and conversation with instantaneously accessible archive database, leading to dramatic reduction in costs and printer noise as well as improved turnaround of investigations.

Analysis of Dealing Code usage has enabled banks to rationalise Dealing Codes leading to significant savings on external service costs.

Founded in 1985, Option Computers is a leading provider of software solutions and services to trading and back office operations. DealHub, the flagship product, is targeted at FX trading operations ranging from single locations through to complete global operations. Option Computers is renowned for its innovative solutions and flexible approach whilst maintaining strong relationships with major dealing service providers.
